

# The lighter the better

## OSRAM now makes installation even easier

The LUMILUX® COMBI EL family of luminaires is distinguished not only by such features as a long service life and low energy consumption, but also makes a convincing impression because it is very user-friendly and particularly light in weight. You will see this as soon as you install one of them: an ingenious mounting system ensures that the work does not take a minute longer than necessary. After all, you ought to be gaining pleasure from these luminaires right from the start.

*The practical key-hole apertures enable the luminaire to be adjusted perfectly during installation. This gives the end consumer a little more freedom – even if the holes for the wall plugs were not drilled in exactly the right places.*

*The spacer supplied with the luminaire enables the connecting cable on the F and F/P versions to be led along behind the luminaire.*

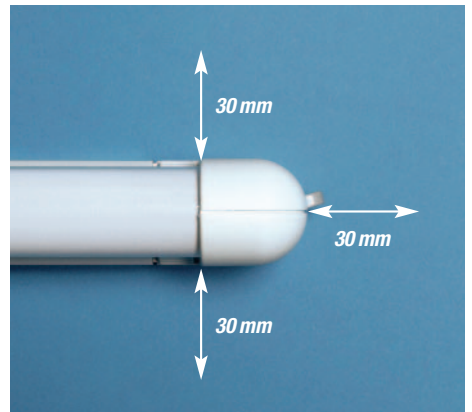

*The angle brackets supplied with the luminaire give the N and N/P versions even more flexibility in installation. If required the luminaire can be rotated through 90° in the desired direction.*

*On the F versions the terminal strip is located underneath the removable cover. Its position can be adjusted to suit the required cable entry.*

*Changing the lamp is easy. Press the stops down at both ends of the luminaire, pull them outwards, and remove it.*

*The LUMILUX® COMBI EL makes installation possible even in a confined space. Only 30 mm space is needed on all four sides.*

### Note:

Accessories for the N and N/P versions include angle brackets, and spacers for the F and F/P versions.
